

BIRD NETTING DUBAI

Complete Guide to Types, Mesh Sizes & Installation
Across UAE

NETTING GUIDE 2025

www.birdcontroldubai.com

What

1

Physical Barrier System

Creates a complete barrier preventing birds from entering any defined area or space.

2

UV-Stabilised Material

Made from UV-resistant HDPE — engineered to survive Dubai's extreme heat and intense sun.

3

Multiple Mesh Sizes

Available in 19mm, 25mm, and 50mm mesh to target different bird species.

4

Nearly Invisible Option

Transparent nylon netting is available for apartments with zero visual impact on views.

Type

1

HDPE Polyethylene Netting

Most common. UV-stabilised, heat-resistant, long-lasting. Available in all mesh sizes.

2

Stainless Steel Wire Mesh

Industrial standard for warehouses and airports. Virtually indestructible.

3

Transparent Nylon Netting

Near-invisible for apartments. Preserves views while providing full bird exclusion.

4

Heavy-Duty Knotted Netting

Maximum strength for large open spans. Used in stadiums and sports facilities.

Choose

1

19mm Mesh

For sparrows, mynas and all small birds. Finest mesh — stops every species.

2

25–28mm Mesh

General mixed bird populations. Most commonly installed mesh size across Dubai.

3

50mm Mesh

For pigeons and large birds only. Not suitable where small birds are present.

4

Custom Sizes

Available on request for specialist agricultural and industrial applications.

Bird

1

Apartment Balconies

Clear netting fully seals balcony without spoiling the view. Popular in Marina, JBR, Downtown.

2

Hotel Terraces

UV-transparent netting keeps outdoor dining areas completely bird-free.

3

Warehouses

Full interior roof netting across trusses prevents roosting and product contamination.

4

Multi-Level Car Parks

Heavy-duty HDPE netting across parking decks protects vehicles from droppings.
